

DIRECTIVES?

Angular features used to
manipulate the DOM.

add custom behavior or change
the appearance and structure of
elements.

Make HTML dynamic and
responsive to application logic.

WHY USE DIRECTIVES?

- Reusable logic
- Dynamic behavior
- Code organization
- Simplify tasks

TYPES OF DIRECTIVES

- **Structural Directives**

- Modify the structure of the DOM (add/remove elements).

- **Attribute Directives**

- Change the appearance or behavior of an element.
- Apply as attributes on elements.

- **Component Directives**

- Components themselves are directives with a template.
- Used to create reusable UI components.

Thank you
